

ABSTRACT OF THE DISCLOSURE

A decoration with visual effects comprised of base, transparent cover, light permeable solid wax and transparent liquid; the cover provided a closed space to contain the liquid; the liquid containing the wax and sequins; the base
5 at the bottom of the cover containing a heat source and a color light source; the liquid being heated to create convection for sequins to float around; wax being divided into multiple pieces; each floating piece of wax giving consistent and atomized light permeability; and the color light source projecting the light into the cover for floating pieces of the wax to present combination of colors and
10 light with beautiful visual effect.
